Ohio Administrative Code
Rule 1551:3-1-03 Photovoltaic energy conversion systems.
Effective: April 10, 1980

A "photovoltaic energy conversion system" is a system which converts solar energy directly to electrical energy. A photovoltaic system requires electrical transmission and storage devices. The components of a photovoltaic system include:

(A) The photovoltaic cell, and any device(s) required to mount the cell;

(B) Electrical conduits from the photovoltaic cells to the point of use or storage; and/or

(C) Storage batteries.
