

Ohio Administrative Code

Rule 3701-84-25 Personnel/staffing - bone marrow transplantation service.

Effective: August 1, 2017

Each provider of a bone marrow transplant service shall meet the following staffing criteria:

(A) A medical director responsible for the oversight of the care provided on the unit who actively performs bone marrow transplant services as part of that transplant service and who is:

(1) Board-certified in hematology, oncology, immunology, or pediatric hematology/oncology or have documented experience in the field of hematopoietic progenitor cell (HPC) transplantation extending over ten years;

(2) An active physician on staff at the hospital providing involved in direct patient care; and

(3) Has a minimum of one year clinical bone marrow transplantation training at a major transplant center in the United States formally recognized as a bone marrow transplant center by at least one of the following:

(a) A national cooperative chemotherapy group;

(b) The national bone marrow donor program; or

(c) A national institute of health-supported bone marrow transplant research program.

(B) At a minimum, one other primary transplantation physician actively participating in the service.

(C) A nursing team that, in order to ensure adequate continuity of care, is committed to the transplant service on a full-time basis and has the training and skills commensurate with the required tasks performed.

(D) The care of bone marrow transplant patients shall be coordinated by a multidisciplinary team

whose members have training and skills commensurate with the required tasks performed.
