

Ohio Administrative Code

Rule 3745-525-350 Termination of a permit to install and operate.

Effective: [October 1, 2026](#)

(A) Termination due to failure to install.

- (1) A permit to install and operate issued pursuant to this chapter for a new CCR unit shall terminate eighteen months after the effective date of the permit to install and operate if the owner or operator has neither undertaken a continuing program of installation nor entered into a binding contractual obligation to undertake and complete within a reasonable time a continuing program of installation of the new CCR unit.
- (2) The owner or operator may request an extension of the termination date. Such request shall be submitted to the director and provide justification for the extension of time and an analysis demonstrating that the CCR unit meets all permit approval criteria established in the rules in effect on the date the permit to install and operate is to expire.
- (3) The director may extend the termination date of a permit to install and operate for a period of time not to exceed twelve months if the director determines that the owner or operator has adequately justified an extension of time and has demonstrated that the CCR unit meets all permit approval criteria established in the rules in effect on the date the permit to install and operate is to expire. No appeal taken from denial of extension of an expiration date shall prevent termination of a permit during the period between denial of extension and final disposition of the appeal unless prohibited by any court or administrative body having jurisdiction over the matter.

(B) Termination at the end of the post-closure care period. The permit to install and operate shall remain in effect until the director has discontinued the post-closure care period.
