

Appendix C Table 5 to Rule 901:10-2-14: Ohio- Nitrogen Leaching Assessment Procedure

Soils are classified as having a high, medium or low nitrogen leaching potential with relative index ratings from 0-10+ for their potential to leach nitrates below the root zone. The leaching potential is rated as high, medium or low by combining the soil's hydrologic soil grouping (A, B, C, or D), the local county's annual rainfall, and the local county's seasonal rainfall (October 1 to March 1).

To determine the soil's nitrogen leaching potential, use the following procedure:

First, determine the soil's hydrological soil grouping: A, B, C, or D. For this information, refer to USDA-NRCS Engineering Field Manual, Chapter 2- Ohio Supplement (1989), Table 2.1 pages 2-42 through 2-83.

Second, determine the local county's annual rainfall and the local county's seasonal rainfall (October 1 to March 1). For this information, refer to USDA-NRCS Engineering Field Manual, Chapter 2- Ohio Supplement (1989), Exhibit OH2-3, Supplement pages 1 through 4 and USDA-NRCS Engineering Field Manual, Chapter 2- Ohio Supplement (1989), Exhibit OH2-1, and Sheets 1 through 3.

Third, refer to the table below - Ohio (By county) Leaching Index Ratings for Soils by Hydrologic

Groups (A, B, C, D) for the respective county to determine the soil's relative leaching index rating.

- (a) Soils with a rating of 0-2 have a low potential to leach nitrates below the root zone.
- (b) Soils with a rating of 3-10 have a medium potential to leach nitrates below the root zone.
- (c) Soils with a rating of 10+ have a high potential to leach nitrates below the root zone.
- (d) All soils with systematic subsurface drains (tile) are rated high potential.

Ohio (By county) Leaching Index Ratings for Soils by Hydrologic Groups (A, B, C, D)

County	A	B	C	D	County	A	B	C	D
1. Adams	15	10	6	4	45. Licking	15	8	6	4
2. Allen	10	6	4	2	46. Logan	15	8	4	4
3. Ashland	15	8	4	4	47. Lorain	15	8	4	2
